1. USB flash drive, also variously known as a thumb drive, pen drive, gig stick, flash stick, jump drive, disk key, disk on key, flash-drive, memory stick, USB stick or USB memory, is a data storage device that includes flash memory with an integrated USB interface. It is typically removable, rewritable and much smaller than an optical disc. Most weigh less than 30 g (1 ounce). Since first appearing on the market in late 2000, as with virtually all other computer memory devices, storage capacities have risen while prices have dropped.

Type the above passage and perform the following action given below.
1. Justify the paragraphs.
2. 5 line spacing for the paragraph.
3. Use of Drop Cap.
4. Inserting 5 x5 table just below the paragraph and give shading to the first row.

<table>
<thead>
<tr>
<th>PSC</th>
<th>PSC</th>
<th>PSC</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>2</td>
<td>3</td>
</tr>
</tbody>
</table>

Use Header and Footer in every page.

6. **Type and Format following text as displayed.**

Entering formula in MS Word has become most easier. You can use the character formatting for simple type of formula such as \((a + b)^2 = a^2 + 2ab + b^2\) or \(2H_2O = 2H_2 + O_2\) while there is equation editor add-on for more complex formula.

7. Optical fiber consists of a core and a cladding layer, selected for total internal reflection due to the difference in the refractive index between the two. In practical fibers, the cladding is usually coated with a layer of acrylate polymer or polyimide.

This coating protects the fiber from damage but does not contribute to its optical waveguide properties. Individual coated fibers (or fibers formed into ribbons or bundles) then have a tough resinbuffer layer or core tube(s) extruded around them to form the cable core.

a) CreateFour paragraph for the text and justify Alignment.
b) Make Drop Cap the first letter of the second paragraph.
c) Make 1.5" line spacing for third paragraph.
d) Change font size on 17 points for the last paragraph.
e) Insert footnote as "Operator Exam" in "Looking" text.
f) Apply numbers for the last five sentences for 4th paragraph.
g) Draw octagon shapes and add your name and center Alignment.
h) Insert a table with 5 column and 6 rows and keep first rows shading with darker 5%.
i) Set up the page layout on Landscape orientation and set up 1.50" and Right 1.05".

8. For use in more strenuous environments, a much more robust cable construction is required. In loose-tube construction the fiber is laid helically into semi-rigid tubes, allowing the cable to stretch without stretching the fiber itself. This protects the fiber from tension during laying and due to temperature changes. Loose-tube fiber may be "dry block" or gel-filled.

Dry block offers less protection to the fibers than gel-filled, but costs considerably less. Instead of a loose tube, the fiber may be embedded in a heavy polymer jacket, commonly called "tight buffer"
construction. Tight buffer cables are offered for a variety of applications, but the two most common are "Breakout" and "Distribution".

Breakout cables normally contain a ripcord, two non-conductive dielectric strengthening members (normally a glass rod epoxy), an aramid yarn, and 3 mm buffer tubing with an additional layer of Kevlar surrounding each fiber. The ripcord is a parallel cord of strong yarn that is situated under the jacket(s) of the cable for jacket removal.

1. Make three columns of 1st paragraph and show line between the column.
2. Give 1” left and 1” right indentation to second paragraph.
3. Give the border and shading to third paragraph.
4. Protect your document.
