B.Sc. Semester CBCS Pattern Examination Scheme

1. There shall be total six semesters.
2. Each semester shall comprise of 90 teaching days.
3. Each Semester I to VI shall be of 150 marks.
4. Distribution of marks will be as follows
   i. Paper I Theory ---- 50 marks
      Internal Assessment ---- 10 marks
   ii. Paper II Theory ---- 50 marks
      Internal Assessment ---- 10 marks
   iii. Practical ---- 30 marks

   Total (i+ii+iii) ---- 150 marks

5. The marks on internal assessment of the student shall be compounded with the theory Paper. The passing marks will be 35% marks.

6. A student will have to perform at least Ten (10) experiments per semester. At the time of Practical examination every student has to perform two experiment, each of three hours duration.
7. The distribution of marks for practical examination is as follows.

Signature of teacher in-charge .................................. Head of Department

9. The internal assessment shall be done by respective college and the marks shall be sent to the university one month prior to the final examination of each semester.

10. All theory papers shall be divided into four units. Each unit shall be covered in 15 periods of 48 minutes.

11. The theory question paper shall be of 3 hours duration and comprise of 5 questions with internal choice and with equal weightage to all units. The pattern of question paper shall be as follows.
Pattern of Question Paper

Subject – Physics

Time: 3 Hours

Maximum marks: 50

Question No. | Marks Allotted
---|---
Qu. 1 EITHER | 10
A (From Unit – I) (i, ii, iii, two or three bits including numerical) | 10
OR B (From Unit – I) [Four bits (a), (b), (c), (d) including numerical] | 4 x 2½
Qu. 2 EITHER | 10
A (From Unit – II) (i, ii, iii, two or three bits including numerical) | 10
OR B (From Unit – II) [Four bits (a), (b), (c), (d) including numerical] | 4 x 2½
Qu. 3 EITHER | 10
A (From Unit – III) (i, ii, iii, two or three bits including numerical) | 10
OR B (From Unit – III) [Four bits (a), (b), (c), (d) including numerical] | 4 x 2½
Qu. 4 EITHER | 10
A (From Unit – IV) (i, ii, iii, two or three bits including numerical) | 10
OR B (From Unit – IV) [Four bits (a), (b), (c), (d) including numerical] | 4 x 2½
Qu. 5 Attempt any TEN questions from the following.
a) From Unit I 1
b) From Unit I 1
c) From Unit I 1
d) From Unit II 1
e) From Unit II 1
f) From Unit II 1
g) From Unit III 1
h) From Unit III 1
i) From Unit III 1
j) From Unit IV 1
k) From Unit IV 1
l) From Unit IV 1

The above pattern is for all two papers of each semester of B.Sc. I (CBCS pattern) & B.Sc. II (CBCS pattern) w.e.f. 2018-19 and B.Sc. III from next subsequent years.
**Proposed Syllabus for B.Sc. I CBCS (Semester Pattern) Subject – Physics**

The syllabus of Physics as per semester system for the B.Sc. I will be implemented from the Academic year 2017-2018.

USPHT01: MECHANICS AND RELATIVITY

Aim: To make the students understand the basic concepts of Mechanics and Relativity as core part of the subject.

Unit I:
Laws of Motion: Newton’s laws of motion and its limitations, Components of velocity and Acceleration (radial and transverse), Frame of reference, inertial and non-inertial frame of reference, uniformly rotating frame, Centripetal force,
Centre of Mass: Centre of mass, Linear momentum about centre of mass, equation of motion of centre of mass.
Numericals.

Unit II:
Collision: Perfectly elastic and inelastic collision in one dimension, velocities of particles in elastic collision, application of elastic collision,
Numericals

Unit III:
Dynamics of rigid body: Moment of inertia, radius of gyration, physical significance of Moment of inertia, Principle of perpendicular and parallel axis (no derivations), Moment of inertia of a ring, rod, solid sphere.
Numericals.

Rotational Motion: Angular velocity and angular momentum. Torque. Conservation of angular momentum. Isotropy and rotation invariance of space, angular impulse, homogeneity and isotropy of time. Conservation of energy (from homogeneity of time and Newton’s laws of motion)
Numericals.

Unit IV:
Numericals.
USPHT02: Gravitation, Oscillation and Properties of Matter

Aim: Students should understand the concept related with Gravitation and Properties of Matter.

Unit I:
Gravitation: Newton’s Law of Gravitation. Motion of a particle in a central force field (motion is in a plane, angular momentum is conserved, areal velocity is constant), Gravitational Field and Gravitational potential. Gravitational potential due to spherical shell.

Numericals.

Unit II:
Free, Damped and Forced harmonic Oscillations, Differential equation of a damped oscillator and its solutions, Energy equation of damped oscillations, Power dissipation, Power absorption, Resonance, Quality factor and band width.
Numericals.

Unit III:
Elasticity: Hooke’s law, Stress-strain diagram, Elastic moduli-Relation between elastic constants Poisson’s Ratio, Expression for Poisson’s ratio in terms of elastic constants, Work done in stretching and in twisting a wire. Twisting couple on a cylinder, Torsional pendulum and determination of rigidity modulus.
Numericals.

Unit IV:
Viscosity: Streamline and Turbulent flow, Coefficient of viscosity, Reynold’s number, equation of continuity, Bernoulli’s theorem and its applications (Lift of an Aeroplane and Atomizer), Poiseulle’s equation.
Surface tension: Surface tension and its molecular interpretation, Angle of contact, Excess of pressure inside a liquid drop, bubble in air and liquid, wetting and spreading.
Numericals.
**USPHP01 : ( Practical)**

Every student will have to perform at least five (05) experiments from each group. This odd semester practical examination shall be conducted by **Internal Examiner**.

**Group A**

1. To determine height of building using Sexant.
4. Study of compound pendulum.
5. To determine ‘g’ by Kater’s Pendulum.
6. To study the Motion of a Spring and calculate (a) Spring Constant (b) Value of g
7. Study of oscillations of mass under different combinations of spring.
8. To determine ‘g’ and velocity for a freely falling body using Digital Timing Technique.
9. Calculation of percentage error of diameter of orifice of capillary.

**Group B**

1. Young’s modulus by Cantilever.
3. Coefficient of viscosity by Poiseulle’s flow method.
4. Determination of surface tension by Quinke’s method.
5. Determination of surface tension by capillary rise method.
7. Young’s modulus by bending of beam.
8. Young’s modulus by Vibration method.
9. To determine the Modulus of Rigidity of a Wire by Maxwell’s needle.
Reference Books: Semester I

3. Properties of Matter – Brijlal
4. Waves and Oscillations – Chaudhari R.N.
5. Berkely Physics Course – Vol. I
6. Physics for degree students B.Sc. First Year – C.L. Arora, Dr P.S. Hemne
7. Mechanics – D.S. Mathur , Dr. P.S. Hemne
8. B.Sc. Practical Physics – Dr. P.S. Hemne, Harnam Singh
9. University Physics- FW Sears, MW Zemansky and HD Young
11. University Physics- Ronald Lane Reese
USPHT03 : Vector Analysis and Electrostatics

Aim : To make the students understand the basic concepts vectors and vector analysis and its applications in electostatics as core part of the subject.

Unit I: Vector Analysis:
Scalar and Vector, Scalar and Vector product, gradient, divergence, Curl and their significance, Vector Integration, Line, surface and volume integrals of Vector fields, Gauss-divergence theorem and Stoke's theorem of vectors (statement only).
Numericals.

Unit II: Electrostatics- I
Definitions of electric field, electric field intensity, electric potential, electric dipole, electric dipole moment, electric quadrupole. Electric field intensity due to electric dipole, electric field as a negative gradient of potential, conservative nature of electric field, torque on a dipole in a uniform electric field. Potential energy of an electric dipole, electrostatics field energy.
Numericals

Unit III: Electrostatics- II
Gauss's theorem of electrostatics(no derivation), applications of Gauss theorem- Electric field due to point charge, infinite line of charge, uniformly charged spherical shell and solid sphere.
Electric potential due to a point charge, electric dipole (along axial line and equatorial line), uniformly charged spherical shell and solid sphere.
Numericals,

Unit IV: Electric field in dielectric:
Numericals.
USPHT04: Magnetostatics and Electromagnetic Waves

Aim: To make the students understand the basic concepts of Magnetostatics and Electromagnetic Waves as core part of the subject.

Unit I: Magnetostatics

Unit II: Electromagnetic Induction:

Faraday's laws of electromagnetic induction, Lenz's law, self (L) and mutual inductance (M), L of single coil, M of two coils. Energy stored in magnetic field. Transformer – Construction and working, Energy losses, parameters and application. Numericals

Unit III: Maxwell’s equations and Electromagnetic Wave Propagation:

Equation of continuity of current, Displacement current, Maxwell's equations, Poynting vector and Poynting theorem, energy density in electromagnetic field, electromagnetic wave propagation through vacuum, transverse nature of EM waves. Numericals

Unit IV: Steady Electric current:

Kirchoff’s laws and its applications (Wheatstone bridge and Carry-foster bridge), Rise and decay of current in LR, CR circuits, time Constants.

Alternating electric current: AC circuits, Complex numbers, j-operator and applications to LR and CR circuits. Numericals
Every student will have to perform at least five (05) experiments from each group. This even semester practical examination shall be conducted by **Internal and External Examiners** both.

**Group A**

1. Use of vibration magnetometers to study a field.

2. To compare capacitance using De’Sauty’s bridge.

3. Measurement of inductance using impedance at different frequencies.

5. Study of decay of currents in LR circuits.

6. Response curve of LCR circuit, resonance frequency and quality factor.

7. Study of Transformer.

**Group B**

1. To determine a Low Resistance by Carey -Foster’s Bridge.

2. To verify the Thevenin’s theorem.

3. To verify the Norton’s Theorem.

4. To verify the Superposition electrical network.

5. To verify the Maximum Power Transfer Theorem.

6. To verify the Milliman’s Theorem.
